H5 Cincinnati: Top Cincinnati Carrier Hotel Enables Low-Latency Network Access

Enterprises, cloud service providers and content companies increasingly require low-latency access to digital partners and customers throughout the technology supply chain. H5's Cincinnati data center is one of the most interconnected buildings in Ohio. Totalling nearly 80,000 square feet, the data center is home to several metro, long haul and telecommunications access providers such as AT&T, Inteliquent, Windstream and Zayo.

H5 Cincinnati is an opportunity to have premier communications network access in one of the most affordable locations in the Midwest. Reliable power is less than \$0.06/kWh and H5 can complete a customized data center build-out within several months. Low latency proximity to eyeballs on the network from Cincinnati is evidenced by the fact that nearly 50% of the US population lives within a 10-hour drive of Ohio.
